

Barcode Rx Menu

[PSO BARCODE MENU]

Using this menu, you can batch barcode refills and renewals of prescriptions and check the quality of the barcode print.

Barcode Batch Prescription Entry
Check Quality of Barcode

Barcode Batch Prescription Entry

[PSO BATCH BARCODE]

You enter refills or renewals by batch entry using barcodes with this option. Select either refills or renewals. Then fill in information for the prescriptions you are going to batch barcode, i.e., fill date, route, etc. Next you will begin wand the barcodes for the prescriptions to be refilled or renewed.

Check Quality of Barcode

[PSO BARCODE CHECK]

No action is taken on the prescription by using this option. You can use this option to check the quality of your printed barcodes or use it to practice using the barcode reader. After the barcode is scanned the barcode number will echo back on the screen and you will be returned to the “Read Barcode” prompt. No action is taken on the prescription by using this option.

The following are some common causes for failure of the barcode reader and how they can be corrected.

1. Barcode too faint (change printer ribbon)
2. Improper scanning (move the wand at a steady rate)
3. Defective barcode reader (replace the reader)

Complete Orders from OERR

[PSO LMOE FINISH]

When a clinician has created an order for a patient, the pharmacist needs to finish and verify the order. This option is used to complete orders from Order Entry Results Reporting V. 3.0. This option uses the List Manager features.

Sites can enter multiple Institutions for an Outpatient Pharmacy site using the *Site Parameter Enter/Edit* [PSO SITE PARAMETERS] option. If a site enters multiple Institutions, the user will be prompted for an Institution when entering the *Complete Orders from OERR* option. After the user selects an Institution, the Pending Orders that will be shown to the user for completion will be those Pending Orders from clinics that are associated with the Institution selected.

Orders may be selected by patient, route, clinic, or priority. Orders can be finished by Clinic or by Clinic Sort Group. Within either of these sorts, orders will be Finished on a first in/first out basis by patient. Clinic Sort Groups can be added or edited in the *Enter/Edit Clinic Sort Groups* [PSO SETUP CLINIC GROUPS] option, which is found under the *Maintenance (Outpatient Pharmacy)* [PSO MAINTENANCE] menu option.

You may also exit out of the option at the “Select Orders By” prompt by entering an E.

Example of Finishing an Order from OERR

Select Outpatient Pharmacy Manager Option: **RX** (Prescriptions)

Orders to be completed: 2

Select Rx (Prescriptions) Option: **COM**plete Orders from OERR

Orders to be completed: 2

Select Orders By: (PA/RT/PR/CL/E): PATIENT// **<RET>**

Process for All Patients

or for A Single Patient: (A/S/E): SINGLE// **<RET>**

Select Patient: **BROWN,GEORGE** 08-16-51 123457212 NO
NSC VETERAN

A question mark can be entered at the “Select Patient” prompt to get a list of patients with pending orders.
